

TRICORN:Scheduler

Scheduling & Capacity Planning System

TRICORN:Scheduler is a real-time, finite capacity workshop scheduling and planning system. It is developed by Fauser AG in Munich and is tightly integrated into TRICORN:Production.

The system is designed as a workshop planning tool designed to help engineering and manufacturing companies optimise their resources and plan production to achieve delivery efficiencies and cost targets.

Seamlessly integrated into Tricorn's Production Control system, TRICORN:Scheduler can update the production plan instantly as requirements change and as manufacturing events are recorded on the factory floor or in the administration office. Having accurate, detailed and live data ensures that the schedule reflects the true situation on the shop floor, allowing managers to take appropriate action based on factual information.

PLANNING INTERFACE

Clear Gantt chart style graphics are easy to understand and familiar to planners, allowing them to visualise the resources available and the jobs to be completed. In addition, a choice of barcode readers, touch-screens or terminals simplifies data collection around the work shop.

TRICORN:Scheduler includes a drag and drop interface which eases the rescheduling of tasks to suit changing circumstances. The results of changes are automatically calculated and graphically displayed, showing the impact on delivery dates across the whole schedule. Traffic light colour coding quickly highlights jobs which are on target for delivery, those which are nearing their due date and those which are overdue.

TRICORN:Scheduler is a key component part of Tricorn's integrated manufacturing solution, sharing the same database. This ensures that any changes made in TRICORN:Production are automatically and instantly reflected in TRICORN:Scheduler. Similarly, any change to the schedule, such as a completed operation, absence or subcontracting operation is immediately reported in TRICORN:Production.

Clear and easy to use one screen technology ensures rapid training and fast software implementation. Users can be productive very quickly, modelling their processes in TRICORN:Scheduler and profiting from instant status reports, which will enable them to optimise their efficiency levels.

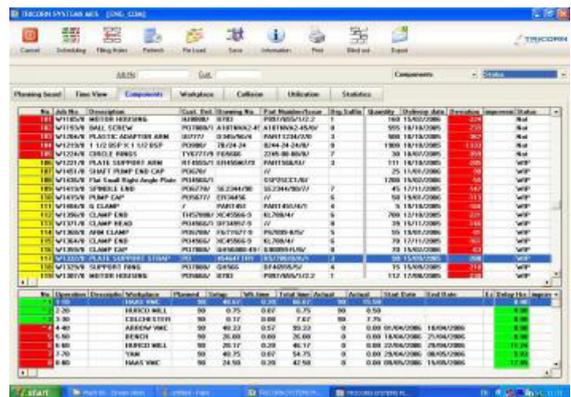

WORKFLOW MANAGEMENT

Jobs and operations are automatically loaded into TRICORN:Scheduler from TRICORN:Production. Through complete integration, new work, including individual components and multilevel assemblies, immediately become

Key Features

- ✓ "Drag & Drop" from one work centre to another.
- ✓ Multiple scheduling methods (delivery date, pass through, just-in-time).
- ✓ "What-if" simulation to assess delivery performance.
- ✓ Capacity visibility weeks into the future.
- ✓ "Capacity Reservations" for expected orders.
- ✓ "Overlap" capability for consecutive operations.
- ✓ Automatic countdown for off-site operations (subcontract).
- ✓ Delivery performance charts.
- ✓ Work centre utilisation.
- ✓ View selected customer works order status.
- ✓ Easily set available hours for a specific resource or group.
- ✓ Multiple shift patterns and calendars.
- ✓ Link similar processes.

part of the schedule, enabling users to graphically see the effect on delivery dates and resources. It is also possible to make "Capacity Reservations" for projected orders and see whether or not a delivery date can be achieved.
